AHMAD HIDAYATULLAH

Full-Stack Web & Android Developer | Information Systems Student

Bekasi, West Java, Indonesia | +62 877-1896-9089 | hidayatahmadd1377@gmail.com | github.com/Medskiyyy | ahmadhidayatullah.my.id

SUMMARY

Information Systems student at Universitas Gunadarma (GPA 3.88/4.00) building full-stack web apps with Next.js and TypeScript, and native Android apps with Kotlin and Jetpack Compose. Built the catalogue site and admin panel that a food business in Serpong still uses, and a multi-tenant SaaS for freelancers. Comfortable owning a feature from the database schema and access rules through to deployment. Available for a part-time internship (about 20 hours a week) or freelance work.

PROJECTS

Pempek Cek Lis | Full-Stack Web Developer

May - Jul 2026 | pempekceklis.biz.id

Next.js, TypeScript, Supabase (PostgreSQL), Tailwind CSS, Turborepo, Vercel

- Built a catalogue site and admin panel for a working food business in Serpong. Still in use: the owner updates the menu, prices, promo banners, and delivery areas without any code change.
- Wrote Row-Level Security policies so anonymous visitors can only read published rows and only the signed-in admin can write; fixed an early policy that checked authentication but not role.
- Statically generated pages revalidated per content type, so edits go live without a redeploy; orders open WhatsApp with the product already in the message.

SyncLancer | Full-Stack Developer, personal product

Jun 2026 - present | synclancer.web.id

Next.js 16, React 19, TypeScript, PostgreSQL, Prisma ORM, Auth.js v5, TanStack Query

- Multi-tenant project management app for freelancers: leads, proposals, projects, tasks, invoices, time tracking, and a client portal with scoped roles.
- Enforced tenant isolation in one shared query layer that refuses to build a query without a workspace id.
- Built a cron endpoint for recurring invoices, in-browser PDF invoices and proposals (@react-pdf/renderer), and a drag-and-drop Kanban pipeline (@dnd-kit) with optimistic updates and rollback.

HitungUang | Android Developer, personal project

Jun 2026 - present

Kotlin, Jetpack Compose, Clean Architecture, Room (FTS4), Dagger Hilt, Google ML Kit

- Offline-first expense tracker with no account and no server, structured as feature-first Clean Architecture.
- On-device receipt scanning with ML Kit OCR; the parsed result is always shown for the user to confirm before saving.
- Instant transaction search with Room FTS4, PIN and biometric lock, and ZIP backup and restore with tested schema migrations.

Mother | Android Developer, personal project

Aug 2026 - present

Kotlin, Jetpack Compose, Material 3, Room, Coroutines & Flow, Foreground Service

- Offline planner combining habits, focus sessions, tasks with deadlines, reminders, and a home-screen widget; v3.6.4 released as an APK through GitHub Releases with an in-app updater.
- Focus timer runs as a Foreground Service with a live chronometer and controls in the notification.
- Traced lock-screen alarms failing on Android 14+ to USE_FULL_SCREEN_INTENT no longer being auto-granted, and added an in-app permission prompt.

SKILLS

Languages	TypeScript, JavaScript, Kotlin, SQL
Web	Next.js (App Router, Server Actions), React 19, Tailwind CSS, shadcn/ui, Prisma ORM, Auth.js v5, REST APIs
Data	PostgreSQL, Supabase (Auth, Storage, Row-Level Security, triggers), Room (FTS4), DataStore
Android	Jetpack Compose, Material 3, Coroutines & Flow, Dagger Hilt, WorkManager, Foreground Services, ML Kit
Tools	Git, GitHub, Turborepo, pnpm, Vercel

EDUCATION

Universitas Gunadarma | Bachelor of Information Systems | GPA 3.88 / 4.00

2025 - present (expected 2029)

Languages: Indonesian (native), English (professional)
